

Subnero Underwater Network

Scalable, reliable, multifunction networks for underwater applications

AUV Network

Command, control and track teams of AUVs over large areas with transparent handovers.

End-End Connectivity

Hardware agnostic end-end connectivity from a user to underwater assets over IP networks.

Sensor Networks

Form large underwater sensor networks for both short and long term monitoring.

Relay & Routing

Transparent relaying, routing, positioning and remote control capabilities.

Diver Networks

Localize and communicate with teams of divers over large areas reliably.

Network Management

Easily manage multiple distributed or co-located underwater mobile as well as static assets.
